Press Release | Infres Methodex Office, NCR

B 6/7 Vasant Vihar | New Delhi 110057 | 91 11 4170 4150 | media@akda.in | www.akda.in

Infres Methodex is an organization specializing in niche office automation products such as shredders and currency counting machines. They needed to comfortably accommodate their current team in a new location, while providing sufficient scope for future expansion. The only brief from the clients was to create an office space that would foster the values of the organization - quality and efficiency. The site was in a generic office building located on the main highway to Faridabad, just beyond the city limits of Delhi. A peculiar characteristic of the space is the presence of a large atrium that virtually divides the space into three distinct zones.

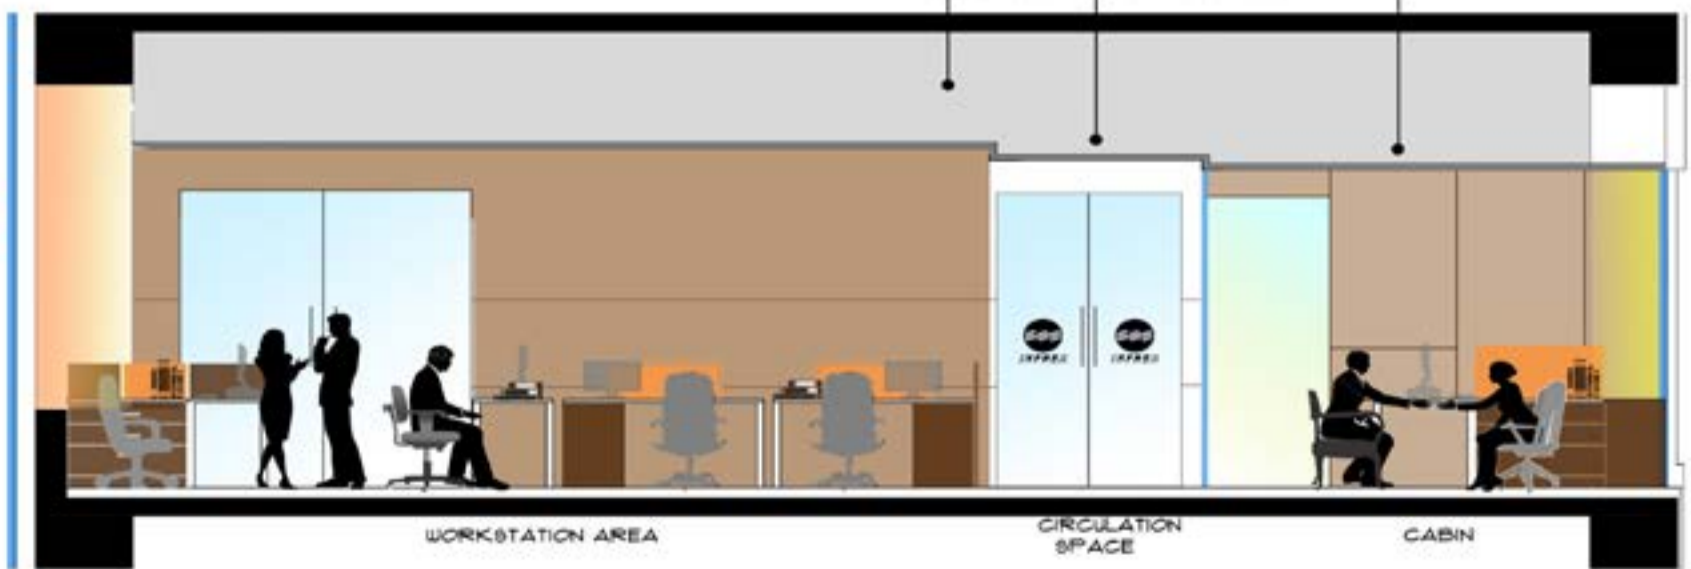

The challenge was to create a unified and open office atmosphere, while dividing the space programmatically into the three zones. The first part of the office, i.e. the entrance areas was laid out for the reception area and the marketing team since they would have the most interactions with visitors. The accounts and technical departments were positioned on the other side of the atrium, while the main management area acted as the bridge between the two and enjoyed the best views out towards the highway. Services were consolidated and pushed to the lightless areas of the building footprint, where they could be easily ventilated into the building air conditioning system.

THE WORKSTATION AREA HAS EFFICIENT DAY LIGHTING THROUGH THE EXTERNAL CURTAIN WALL GLAZING

THE HEIGHTS OF THE FALSE CEILING VARY ACCORDING TO THE FUNCTION OF THE SPACE

CABINS, COMPARATIVELY LESS IN AREA, ARE SUFFICIENTLY ILLUMINATED BY THE DIFFUSED LIGHT FROM CENTRAL COURTYARD

A light oak colour is used to offset the crisp white surfaces in the open plan areas and a darker, more mature oak is used in the cabins of the senior management and the board room. The reception area features a continuous ribbon of paneling that envelops the entire space. A raised seating area is enclosed by a series of wooden beams that provide a fleeting glimpse of the interior from the entrance, carrying forward the overall theme of transparency and lightness. A sophisticated energy saving air-conditioning system that allows for efficient zone-wise cooling was adopted to ensure the differ-

The dining space, located just off the main workspaces is treated in complete contrast to the subtle clean lines of the main office. Meant to provide the experience of retreating to a restaurant, the entire space remains visually connected to the office through a fully glazed partition that provides acoustical and olfactory insulation. The raw soffits are left untreated and the black paint offsets the circular form of the silver ducts. Below these, LED tube lights are suspended in angular clusters to create a dramatic layering of services. The tables and cabinetry are finished in a bright orange, complementing the light terra-cotta tiles.
